

**ASTM E 90 SOUND TRANSMISSION LOSS
TEST REPORT**

Rendered to:

THERMA-TRU DOORS

SERIES/MODEL: Classic-Craft, Fiber-Classic, and Smooth-Star

TYPE: 3/6-8 Insulated IG Full Lite Side Hinged Door

Summary of Test Results				
ATI Data File No.	Leaf Description	STC	OITC	EWNR
74367.01A*	Fiberglass skins and expanded foam core with 1/2" IG (1/8" tempered, 1/4" air space, 1/8" tempered), inoperable test	27	25	30
74367.01B	Fiberglass skins and expanded foam core with 1/2" IG (1/8" tempered, 1/4" air space, 1/8" tempered), operable test	26	24	28

** This test was not performed in accordance with ASTM E 90, the door system was not operable. The door leaf was sealed on both sides with duct tape.*

Reference should be made to Architectural Testing, Inc. Report No. 74367.01-113-11 for complete test specimen description. The complete test results are listed in Appendix B.

ACOUSTICAL PERFORMANCE TEST REPORT

Rendered to:

THERMA-TRU DOORS
118 Industrial Drive
Edgerton, Ohio 73517

Report No: 74367.01-113-11
Test Date: 08/15/07
Report Date: 12/06/07
Expiration Date: 08/15/11

Test Sample Identification:

Series/Model: Classic-Craft, Fiber-Classic, and Smooth-Star

Type: 3/6-8 Insulated IG Full Lite Side Hinged Door

Overall Size: 37-7/8" by 82-1/8"

Leaf Size: 36" by 79-1/4"

Leaf Description: Fiberglass Skins and Expanded Foam Core

Leaf Glazing: 1/2" IG (1/8" tempered, 1/4" air space, 1/8" tempered)

Project Scope: Architectural Testing, Inc. was contracted by Therma-Tru Doors to conduct sound transmission loss tests on a Series/Model Classic-Craft, Fiber-Classic, and Smooth-Star, 3/6-8 Insulated IG full lite side hinged door. A summary of the results is listed in the Test Results section and the complete test data is included as Appendix B of this report. The sample was provided by the client.

Test Methods: The acoustical tests were conducted in accordance with the following:

ASTM E 90-04, *Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions.**

ASTM E 413-04, *Classification for Rating Sound Insulation.*

Test Methods: (Continued)

ASTM E 1332-90 (Re-approved 2003), *Standard Classification for Determination of Outdoor-Indoor Transmission Class.*

ASTM E 2235-04, *Standard Test Method for Determination of Decay Rates for Use in Sound Insulation Test Methods.*

* For test number 74367.01A, the following deviation from the standard was performed: The door was tested in a sealed condition and was not operable during the test. The door leaf was sealed on both sides with duct tape.

Test Equipment: The equipment used to conduct these tests meets the requirements of ASTM E 90. The microphones were calibrated before conducting sound transmission loss tests. The test equipment and test chamber descriptions are listed in Appendix A.

Sample Installation:

Sound transmission loss tests were initially performed on a filler wall that was designed to test 40" by 86" and 80" by 86" test specimens. The filler wall achieved an STC rating of 64.

The 40" by 86" plug was removed from the filler wall assembly. The door system was placed on a foam isolation pad in the test opening. Duct seal was used to seal the perimeter of the test specimen to the test opening on both sides. The interior side of the door frame, when installed, was approximately 1/4" from being flush with the receiving room side of the filler wall. A stethoscope was used to check for any abnormal air leaks around the test specimen prior to testing. The door panel was opened and closed at least five times prior to testing.

Test Procedure: The door was closed and latched for this test. The sound transmission loss test consisted of the following measurements: One background noise sound pressure level and five sound absorption measurements were conducted at each of the five microphone positions. Two sound pressure level measurements were made simultaneously in both rooms, at each of the five microphone positions. The air temperature and relative humidity conditions were monitored and recorded during the background, absorption, source, and receive room measurements.

Sample Descriptions:

Door Construction:

	Main Frame	Leaf
Size	37-7/8" by 82-1/8"	36" by 79-1/4"
Thickness	4-1/2"	1-3/4"
Corners	Coped	Butted
Fasteners	Screws	Glue
Seal Method	Sealant	None
Material	Wood	See below
Reinforcement	N/A	N/A
Thermal Break Material	N/A	N/A
Daylight Opening Size	N/A	21-1/4" by 63-1/8"

Leaf Materials:

Layers (outside to inside)	Layer Description (material and thickness)
1	0.085" Fiberglass skin
2	1.559" Expanded foam
3	0.085" Fiberglass skin

Comments: The lock stile was constructed from 3-5/8" by 1-1/2" plywood. The hinge stile was constructed from 7/8" by 1/2" wood. The top rail contained a composite member measuring 1" by 1-1/2". The bottom rail contained a composite member measuring 7/8" by 1-1/2". The door knob and deadbolt holes were reinforced by the lock stile. The hinge stile and lock stile were capped with 5/16" by 1-5/16" wood.

Sample Descriptions: (Continued)

Glazing:

Measured Overall Insulation Glass Unit Thickness	0.507"
Spacer Type	Aluminum

	Exterior Sheet	Gap	Interior Sheet
Measured Thickness	0.122"	0.263"	0.122"
Muntin Pattern	N/A	N/A	N/A
Material	Tempered	Air*	Tempered
Laminate Material	N/A	N/A	N/A

Glazing Method	Interior pressure glazed
Glazing Material	Butyl tape
Glazing Bead Material	Aluminum

Components:

	TYPE	QUANTITY	LOCATION
Weatherstrip			
	Foam filled leaf gasket	1 Row	Head and jambs
	Triple leaf flexible door sweep with 1/2" bulb gasket	1	Leaf bottom rail
Hardware			
	Full mortise butt hinge	4	Hinge jamb / hinge stile
	Dead bolt assembly	1	Lock stile
	Adjustable threshold	1	Sill
	Door knob	1	Lock stile
	Strike plate	2	Lock jamb
Drainage			
	Sloped sill	N/A	N/A

* Stated per client/manufacturer, N/A-non applicable

Comments: The client did not supply drawings on the Series/Model Classic-Craft, Fiber-Classic, and Smooth-Star, 3/6-8 Insulated IG full lite side hinged door. The door was disassembled, and the components will be retained by Architectural Testing, Inc. for four years. Photographs of the test specimen are included in Appendix C.

Test Results: The STC (Sound Transmission Class) and EWNR (Exterior Wall Noise Reduction) rating were calculated in accordance with ASTM E 413. The OITC (Outdoor-Indoor Transmission Class) was calculated in accordance with ASTM E 1332. A summary of the sound transmission loss test results on the Series/Model Classic-Craft, Fiber-Classic, and Smooth-Star, 3/6-8 Insulated IG full lite side hinged door is listed below.

Summary of Test Results				
ATI Data File No.	Leaf Description	STC	OITC	EWNR
74367.01A*	Fiberglass skins and expanded foam core with 1/2" IG (1/8" tempered, 1/4" air space, 1/8" tempered), inoperable test	27	25	30
74367.01B	Fiberglass skins and expanded foam core with 1/2" IG (1/8" tempered, 1/4" air space, 1/8" tempered), operable test	26	24	28

** This test was not performed in accordance with ASTM E 90, the door system was not operable. The door leaf was sealed on both sides with duct tape.*

The complete test results are listed in Appendix B. Flanking limit tests and reference specimen tests are available upon request.

Detailed drawings, data sheets, representative samples of test specimens, a copy of this report, or other pertinent project documentation will be retained by Architectural Testing, Inc. for a period of four years from the original test date. At the end of this retention period, such materials shall be discarded without notice and the service life of this report will expire. Results obtained are tested values and were secured by using the designated test methods. This report does not constitute certification of this product nor an opinion or endorsement by this laboratory. It is the exclusive property of the client so named herein and relates only to the specimen(s) tested. This report may not be reproduced, except in full, without the written approval of Architectural Testing, Inc.
